

Windows Calibration

What is Windows Calibration ? How is it related to A/C Control in APP? The APP is designed in a such way, when the Door/Windows/Tailgate/Charging port are opened, the APP A/C function won't work properly. Please find the steps below:

- Open all the Four windows, one by one, and while closing it, the customer will receive a "Click" sound, it means the vehicle window is fully calibrated. These steps must be repeated for all four windows separately
- Window closing/opening, 3-4 cycles must be performed.
- Tailgate, must be open/closed for 1- 2 Cycles.
- Check if the Charging port cover is closed, properly.
- Lock the Car, place the vehicle key faraway from vehicle, try controlling the vehicle with the APP.
